

Quick Setup Guide

This manual is designed to get your device ready for use in 3 basic steps.

1. Create a user
2. Internet connection
3. Add Channel

For detailed setup and installation videos, please visit our YouTube channel :

<https://www.youtube.com/watch?v=rHDwZzmjQHc&list=PLyg5p-juhcLbqAB3iTjFwgoEZ53CdPuej>

Box contents:

1. User manual,
2. Warranty Certificate,
3. Device,
4. Power Adapter

Once you have connected your device to the adapter and plugged into an outlet at a distance of 10 meters from the modem, your device will be ready for installation.

You need to download and install the free rewote application, which you can manage your product,

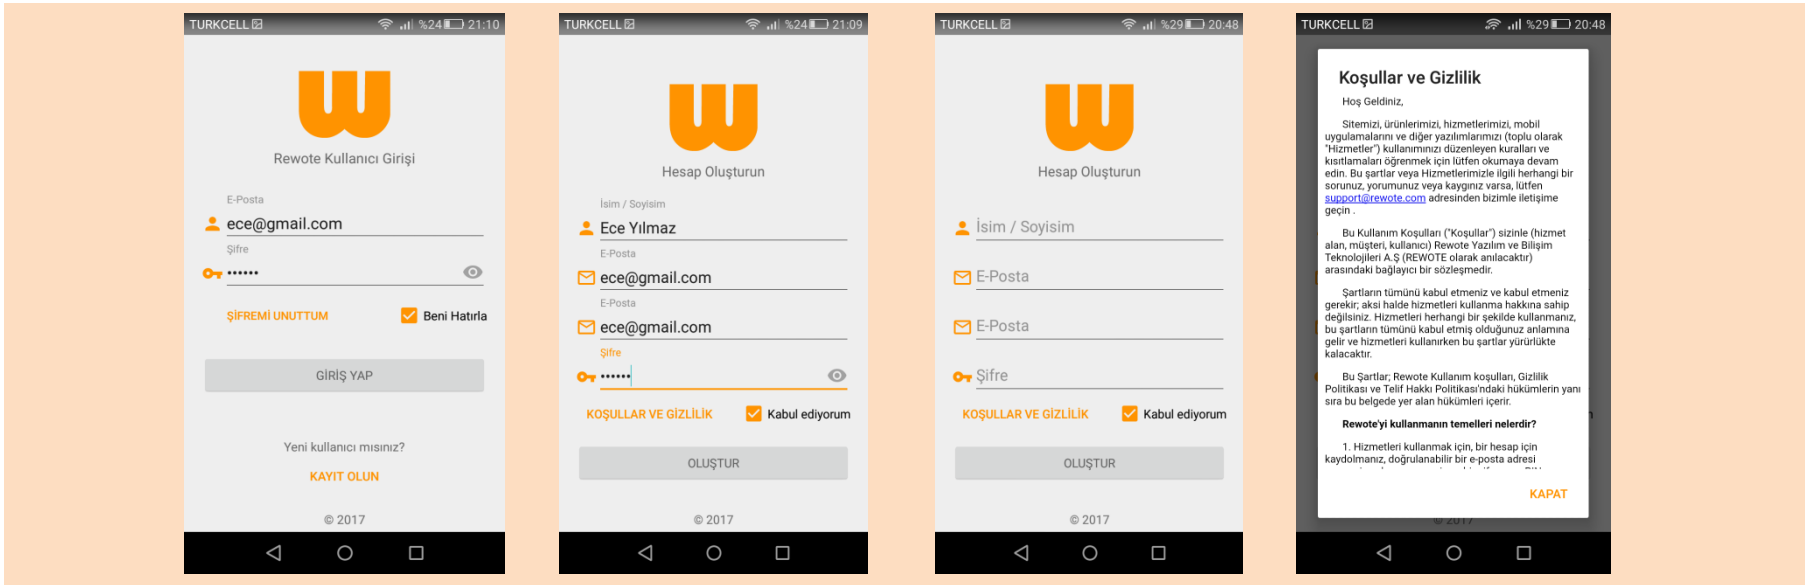

CREATE A USER

When the application is run for the first time, you need to click the **REGISTER** button at the bottom of the screen and fill in the information on the screen and create a new user.

This user (admin) that you define in the initial setup of your Rewote has all the privileges.

The settings menu is only available with this user. If there will be other users, the authorization will be given by this user.

If you are logged in with your own mobile device and your own user and want to not ask the user / password again on this device, you can choose to log in without asking the password by checking the **REMEMBER ME** box. To deactivate this option, simply exit the application.

INTERNET CONNECTION

When the device is removed from the box for initial installation and given its energy, rewote is ready.

The internet connection is made via the mobile application.

After logging into the application with your authorized user you created:

First of all (if you have more than one Rewote device), you must give a name (home, office etc.) to the device where you will install the device. (Figure.1)

Then, click **SEARCH** button, when you see the name of the product (Figure.2) and the product serial number (eg S / N 12345), and then select your device (Figure.3), the current wireless network (wireless network name / SSID) and network password (Fig. 5), your device will have access to the internet.

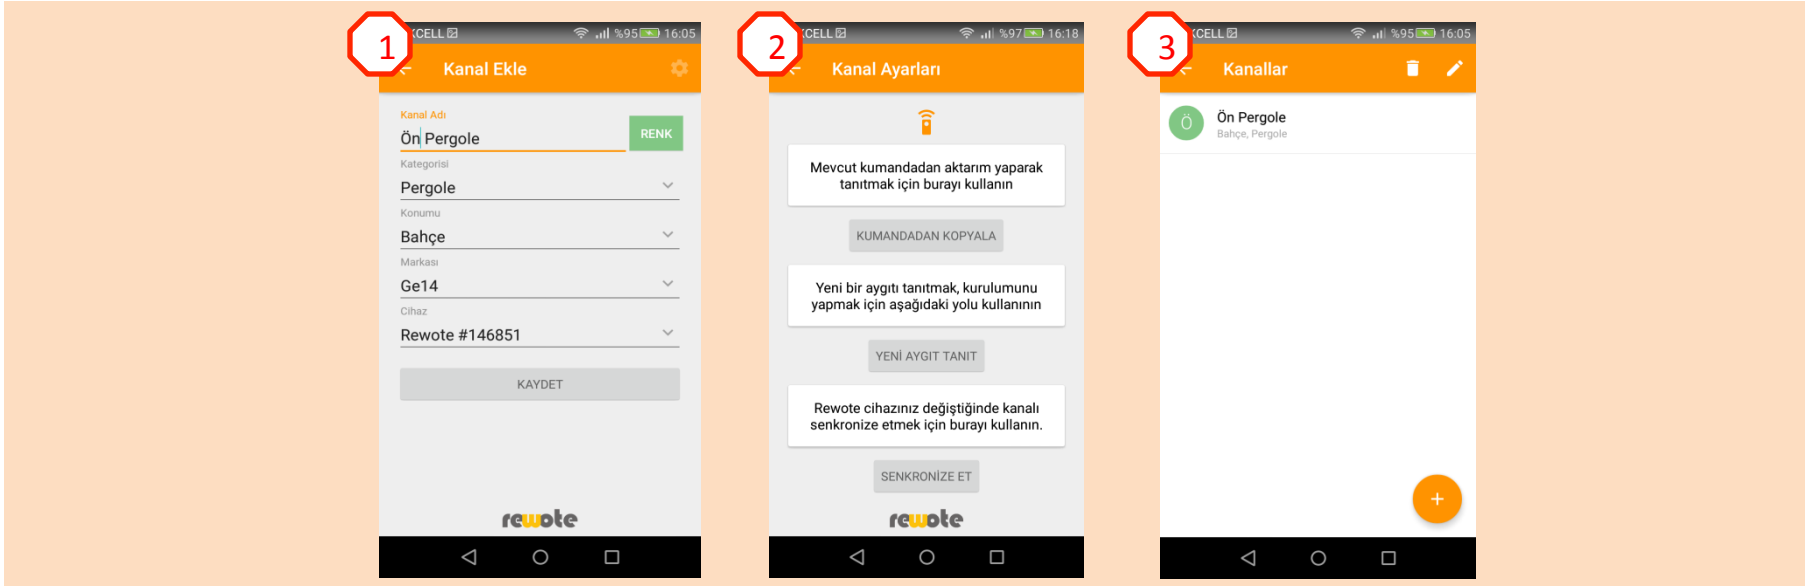

Note: During the settings you must be connected to the same wireless network as your mobile device.

In your existing wireless network, if you are using firewall authorization, access permission, authentication, and security methods, you must allow access to the Internet by entering the MAC address information into your firewall.

ADD CHANNEL

Adding channels with the CHANNEL menu under the SETTINGS tab in the left menu.

On this screen you can give the desired name to the channel , location (pre listed), category (pre listed) and the type of the motor in the new channel insert window (Picture.1) which is opened with the (+) button, and if you have more than one device, you can specify which rewote to manage with your device.

Note: After all of this information is entered and saved, there is no Brand change.

When you click the CHANNEL SETUP button that will be active after the SAVE button depending on the motor brand of the channel you are adding, the appropriate options will appear in the pairing screen that opened (Fig.2) depending on your motor model.

Follow the instructions to complete the motor matching process. (Fig.3).

Your system is now ready for use.
